#### Food Handling Instructions

Cold foods should be maintained at 40 °F or below until served.

Raw meats should be stored away from other foods to avoid cross-contamination.

A thermometer must be used to ensure the correct internal cooking temperature has been reached for hamburger patties, since consuming undercooked ground beef can cause serious illness and can be fatal. Cook burgers on both sides until juices are clear, then insert a thermometer into the center of patty and check for an internal temperature of 155 °F. When using the disposable thermometers listed on this order form, the tip of the thermometer will turn from white to black when 155 °F has been reached.

Chill uneaten burgers below 40  $^\circ F$  within two hours of cooking, or discard.

If you are a person with a disability and desire assistance or accommodation, please contact a dining center manager.
